

Your walkthrough

I have driven every one of these as a real member account — not as an admin — and fixed what it found. **This is your turn to disbelieve me.**

Do this first, or you will test the wrong app

The app asks before it updates itself. If you have it on your home screen, **close it completely and reopen it**, and accept the update banner if one appears. Otherwise you are looking at a version from before today.

How to use this

Each line is **one thing to do** and **exactly what should happen**. Tick it or cross it. A cross is more useful to me than a tick — write what you saw instead.

What this does NOT cover, and why

Jira. It is still switched off, and it stays off until a credential can actually read NONP — that needs the read-only account only you can make. Nothing on these pages depends on it.

Does it answer your question?

1

Open **nphiescore.com** on your phone.

☐

ok / not

"82 of 406 capabilities live", across 104 organizations, with three bars under it: Live, In testing, Planned.

2

Scroll down that first screen.

☐

ok / not

Ten capability rows, then the ladder, then what moved recently. No sideways scrolling anywhere.

3

Press العربية in the header.

☐

ok / not

Everything flips to Arabic and right-to-left, on the same screen, without reloading. Press it again to come back.

4

Tap **Map**.

☐

ok / not

A **list** of organizations, not a picture. That is deliberate on a phone: the tree gives 104 organizations fourteen pixels each.

5

Press the **Map** button in the bar above the list.

☐

ok / not

The picture appears. The button now reads **Table**. Press it again and you are back to the list — and it remembers which you chose.

Can you actually use it?

6

On the map, tap the **magnifying glass** in the header and type **Hamra**.

☐

ok / not

Al Hamra Hospital appears as you type. Press it and the map opens there.

7

Tap any organization.

☐

ok / not

A panel opens from the side with its details — stage, owner, capabilities — and the fields can be edited.

8

Type one line into the box at the bottom of the map and press **Capture**. Try: **test line #UHR !high**

☐

ok / not

The tokens turn into fields as you type. After Capture, the item exists. Delete it afterwards — this is a test.

9

Turn on **flight mode**, capture another line, then turn flight mode off.

☐

ok / not

It says it is saved on your device, a banner counts it as waiting, and it syncs by itself when the network returns. **Nothing you typed is lost.**

10

Tap **PMO**, then swipe along its tabs.

☐

ok / not

Eight tabs. Most are empty and say so plainly rather than showing a zero. The last reads الأهداف والنتائج (**OKR**) in Arabic.

Expected, not broken

These are all correct behaviour

Most of the PMO is empty. Nothing has been typed into it yet.

“Needs attention” shows nine items with odd names — “hi”, “Sprint 38 deplo”, “Branch VPN tunnel flap”. Those are ten leftover test items from the tool this used to be. Say the word and I delete them.

The two meetings are called “Test” and “Weekly sync”. Same thing.

Organization names stay in English in Arabic mode. They came from Jira in English and no Arabic name was imported.

Jira appears nowhere. It is off until the credential works.

One thing I want your decision on

A member can add **Actions** and **Risks**, and nothing else. Projects, Initiatives, Revenue and OKRs are director-and-above, so eighteen of your twenty-seven people will find four of the six registers read-only, with nothing on screen saying why.

That is what the permissions were built to say. **Tell me if it is what you meant.**

When you are done

Send me the crosses. If there are none, the next thing that happens is the Jira account — and after that, the codes.
